

Health and Safety Reopening Plan:

- **Masks:**

All Employees, if medically able, will be wearing masks when inside the building or working closely around other staff or guests. Guests are encouraged to wear masks when inside the building or around other guests.

- **Daily Staff Health Checks:**

All staff will be required to document their health status prior to work and if they have been exposed to anyone, diagnosed with COVID-19. All staff will be informed not to show up for work if they are sick or have any signs or symptoms of COVID-19, Flu, Seasonal Cold, or any abnormalities which could cause risk to other staff or guests.

- **Control Daily Park Capacity:**

We will be monitoring and controlling guest capacity as set by Gov. Whitmer's Executive Orders.

- **Separate Employees and Guests with protective equipment:**

We have installed protective equipment at our sales counters to separate guests from employees. Employees are encouraged to report any concerns on areas that may require more PPE.

- **Staff Training:**

All Staff will be trained prior to returning to work. Training will focus on recognizing signs and symptoms of COVID-19, best practices to prevent spreading COVID-19, and specific to Captain Mikes Operation to provide a safe environment to our staff and guests.

- **Introduce CLEANING TEAMS to disinfect common areas:**

We are increasing our efforts to clean, sanitize and disinfect all high touch points, such as: Tables, Railings, Door Handles, etc. Extra cleaning process and new chemicals have been added to our opening and closing list as well as during operations.

- **Provide Hand Sanitizing Stations throughout the Facility:**

We will have a large number of stations throughout the facility for guest and staff use. These stations will promote hand sanitizing prior to ride entrance.

- **Attraction Sanitation:**

Every attraction participant will be asked to use hand sanitizer prior to and immediately following the attraction. We will have accessible stations placed at every attraction. Staff will disinfect/sanitize attractions after each use.

- **Ozone Generator added to Arcade area:**

Ozone generators destroy other viruses by diffusing the gas through the protein coat of the cell into the nucleic acid core and damaging the RNA of the virus. While healthy cells have complex enzyme systems for protection, virus's have no such protections against oxidative stress which makes them vulnerable to ozone. Although it cannot be claimed to damage the COVID-19 cell, as no studies have been done yet, it does kill SAR's and MER's which are almost identical to the COVID-19 virus.
